

FARHAN SAYYED

Full-Stack Engineer | Cloud & DevOps

Mumbai, India | +91-8928040454 | farhan.sayyed.tech@gmail.com

linkedin.com/in/farhan-sayyed | github.com/Farhan8928

PROFESSIONAL SUMMARY

Full-Stack Engineer with **2.5+ years** building **multi-tenant SaaS** platforms in TypeScript, React, and Node.js for clients in healthcare, finance, education, logistics, retail, and manufacturing. Specialises in **performance at scale**, cutting report latency by up to **98.5%** on **4.5 million records**, and owns delivery end to end, from client requirements through **Docker, CI/CD, and AWS** to production.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2023), HTML5, CSS3, SQL, Bash

Frontend: React, Next.js, React Native, Expo, Redux, Tailwind CSS, Responsive design, WCAG 2.1 AA

Backend: Node.js, Express.js, NestJS, REST APIs, Socket.IO, JWT, OAuth 2.0, OpenAPI/Swagger

Databases: MongoDB, Mongoose, PostgreSQL, MySQL, Redis, Prisma ORM, TypeORM, Index design, Query optimisation

Cloud & DevOps: AWS (S3, IAM, Cognito), Microsoft Azure, Google Cloud, Docker, Docker Compose, NGINX, Linux, CI/CD, GitHub Actions, Infrastructure as Code

AI & Testing: LLM integration (Google Gemini, Anthropic Claude), Jest, Playwright, Supertest, RBAC, Multi-tenant isolation, GDPR

Tools & Practices: Git, GitHub, Postman, Jira, Agile/Scrum, Code review, Technical documentation, Requirements gathering, Stakeholder communication

PROFESSIONAL EXPERIENCE

Full-Stack Developer

February 2025 - Present

FiveM Infotech, Mumbai, India

- Partnered with client stakeholders through weekly demos to deliver **12+ production applications across 6 industries**, re-architecting the flagship as a **multi-tenant SaaS** so a client onboards by configuration, shipping to **4 platforms from one TypeScript codebase**.
- Cut a 365-day hospital billing report **98.5%, from 10.5 seconds to 152 ms**, by stamping each bill with its department and replacing 2 per-bill \$lookups with an indexed range; the 30-day view fell **95%**.
- Reduced release to a **single merge across 5 products** with **GitHub Actions**, running services in **multi-stage Docker builds, Docker Compose, and NGINX on infrastructure as code**, with encrypted nightly backups and S3 presigned URLs keeping credentials off the client.
- Held all **83 paths inside p95 latency budgets** at **4.5 million documents** - taking **6 failing endpoints to zero** and cutting the laboratory report **67%** and inventory report **52%** - by redesigning indexes across 13 collections, enforced by a CI gate.
- Integrated **Google Gemini** for invoice OCR, **eliminating manual stock entry**, and vernacular content generation across **7 Indian languages**; timeout budgets, moderation, and graceful fallback keep a model outage from failing the request.
- Eliminated **100% of 473 serious and critical accessibility violations** (WCAG 2.1 AA, axe across 46 screens, 9 roles, and 2 viewports) by fixing accessibility state once in shared components.
- Hardened production APIs with **rate limiting, NoSQL-injection and XSS sanitisation, and Zod validation**, secured sessions with **JWT refresh-token rotation, device limits, and login lockout**, and documented every API in **Swagger/OpenAPI**.
- Integrated **10 third-party services** - Stripe, Razorpay, Agora, Twilio, Firebase, WhatsApp Business API, and SAP ERP - and handed every system over with **architecture notes, runbooks, and user manuals** used to train client staff.

Allied, Mumbai, India

- Collaborated with the finance team and senior engineers through code review to build **financial reporting dashboards** in **Next.js (App Router)** and **NestJS**, with role-based REST APIs secured by **AWS Cognito** and **JWT**.
- Reduced query load time **60%** through **PostgreSQL** schema design and **Prisma ORM** query tuning.
- Improved high-traffic report performance **40%** with **Redis caching**, compound indexes, and optimised MongoDB aggregation pipelines.
- Cut duplicated code **30%** by extracting shared authentication, validation, logging, and error-handling middleware across NestJS and Express.
- Configured **automated nightly backups and monitoring alerts** on AWS for production PostgreSQL and MongoDB, and built secure PDF statement generation behind access-controlled endpoints.

PROJECTS

HMS - Hospital Management System | hms.fiveminfotech.com

(Node.js, Express 5, MongoDB, Expo, Electron, Docker)

Multi-tenant platform spanning reception, consultation, wards, laboratory, pharmacy, and billing, scoped to 9 staff roles. Load-tested to 4.5M documents with 221 test files; latency budgets and query-plan rules run on every push.

Plusveda - Multi-Tenant Inventory & POS SaaS | plusveda.online

(Node.js, MongoDB, Docker, NGINX, Expo, Electron)

Pharmacy and warehouse platform across 182 REST endpoints and 33 data models. Ships to Android, iOS, web, and Windows desktop, and runs stock writes transactionally on a MongoDB replica set.

ParentAI - AI Learning Platform

(Node.js, MongoDB, Expo, Google Gemini, Razorpay, IaC)

Turns a school topic into a 30-minute parent-led session across 7 Indian languages. Infrastructure as code; 5 GitHub Actions workflows lint, test, and ship releases behind a build-time compliance gate.

Baker CRM - Sales Pipeline CRM

(Next.js App Router, TypeScript, MySQL, TypeORM, NextAuth, AWS S3)

Sales pipeline across 8 stages with assignment, follow-ups, and interaction history, on a relational MySQL schema with versioned TypeORM migrations.

EDUCATION

Bachelor of Science in Computer Science , Mumbai University, Mumbai, India	2020 - 2023
Higher Secondary Certificate (Science) , Ideal College, Mumbai, India	2018 - 2020
Secondary School Certificate (SSC) , Ideal High School, Mumbai, India	2018

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900) | Microsoft Certified: Azure AI Fundamentals (AI-900)
